

IBM HR Analytics Dashboard

Business Problem

Employee attrition is a major challenge for organizations because it increases recruitment costs, reduces productivity, and affects employee morale.

This project analyzes IBM HR employee data using SQL, Python, and Power BI to identify the factors that influence employee attrition and provide business recommendations.

Project Objectives

- Analyze employee attrition trends.
- Identify departments with high attrition.
- Identify job roles with high attrition.
- Build an interactive Power BI dashboard.
- Provide business recommendations.

Dataset Information

Dataset : IBM HR Analytics

Source : Kaggle

Records : 1470

Columns : 35

Tools Used

SQL

Python

Pandas

Power BI

DAX

GitHub

Key Business Insights

1. Sales department has the highest employee attrition.
2. Sales Representatives have the highest attrition.
3. Employees with lower salaries leave more frequently.
4. Lower job satisfaction increases attrition.
5. New employees have higher attrition.

Business Recommendations

- Improve employee onboarding.
- Increase employee engagement.
- Review salaries for high-risk roles.
- Conduct regular satisfaction surveys.
- Provide career growth opportunities.

Conclusion

This project demonstrates how SQL, Python, and Power BI can be used to analyze HR data and provide useful business insights for better decision making.
